

The benefits of E-10 Unleaded are clear.

Cleaner air: The use of E-10 Unleaded reduces toxic emissions in engine exhaust—helping reduce air pollution.

Higher octane: The ethanol in E-10 Unleaded adds two to three points of octane to ordinary unleaded gasoline—helping improve engine performance.

Every major automaker in the world approves its use: From Audi to Volvo, every car maker says E-10 Unleaded is a good fuel choice—and many recommend its use for its clean air benefits.

Cleaner fuel injectors: E-10 Unleaded helps prevent the build-up of power-robbing deposits in fuel injection systems—keeping important engine parts cleaner.

American-made product: The ethanol in E-10 Unleaded is made right here in the United States from corn and other grains—helping U.S. agriculture and boosting our nation's economy.

Reduced dependence on foreign oil: Since E-10 Unleaded is made from renewable sources we grow right here, we help reduce our dangerous reliance on foreign oil.

Prevents gas line freeze up: The ethanol in E-10 Unleaded suspends moisture in your fuel system—eliminating the need for gas tank additives in cold weather.

Here's what an experienced auto technician says about E-10 Unleaded with Ethanol:

"I've been an auto technician for more than 30 years. I've used E-10 Unleaded in my vehicles for many years, as long as it has been available in my area—and I recommend it to my customers for its high octane, clean-burning and economic benefits. I've worked on thousands of vehicles and I have never seen an engine problem that could be traced to the use of E-10 Unleaded.

"If your tech tells you not to put E-10 Unleaded in your car, I'd ask him why the people who actually make the car say it's okay to use it—because every car maker in the world approves its use."
